Cilangkap, Jakarta Timur

Programmer

SKILLS

Programming skills :

- HTML, CSS (Intermediate)
- MySQL (Intermediate)
- Javascript (Intermediate)
- PHP/Laravel (Beginner)
- C# (Beginner)

Tools :

- Visual Studio Code
- Git/GitHub
- Figma
- Microsoft Office
- XAMPP
- Unity Engine

ORGANIZATIONAL EXPERIENCE

KMK Aloysius Gonzaga USU (2021-2022)

- As the Interest and Talent Division member, organized activities to develop the interests and talents of organization members.

HIMATIF USU (2019-2023)

- Participated in organizing committees and actively attended scheduled organizational events as a member of the organization.

SELF-DIRECTED PROJECTS

MyBookList, To strengthen my understanding of Laravel, i developed a simple web application for managing personal book records. I developed the application using Laravel, implementing features such as user account, as well as functionality for users to manually input, manage, and organize their book data. The project demonstrates my ability to build a structured web application and further understanding of Laravel.

Programmer

Github Portfolio, a basic web-based portfolio application, leveraging GitHub's hosting services to showcase my work. Check it on <https://bit.ly/SPM-EPorto>.

New Fantasy, To test RPG maker application, i start this project using one chapter of a novel i wrote as the base story. I designed the game structure, adapted the story into gameplay, and utilized mostly built-in RPG Maker assets, while supplementing them with AI-generated content that I refined using Photoshop. As a result, the project demonstrates my ability to adapt written storytelling into a simple game experience.

Unity-based Simple Games, To support my game development learning journey, I created a two small game projects using Unity, including simple versions of Flappy Bird and Tetris. My objective was to practice my understanding of core Unity 2D concepts. I developed these games by implementing player controls, collision detection, scoring systems, and basic game loops. As a result, the project shows my skills in Unity development, particularly in building functional 2D games.

Text-based Adventure Game, another simple game where the player must escape a small-scale labyrinth. This game is built using C# and the player uses text input to give commands to the character. The features include save/load, combat, shop, stats, class, experience system, sound effects, and room management.

Citridx, a Mobile-Based Citrus Plant Disease Detection System Utilizing Deep Learning Technique with YOLOv8 Algorithm, Developed on a Kotlin-Based Mobile Application.

EDUCATION

Mathematics and Science, **SMA Negeri 1 Sidikalang** 2016-2019

Bachelor of Information Technology, **University of North Sumatra** 2019-2024
